Tran Khanh

Full Stack Developer

I have over a decade of experience in web development and business intelligence, data and analytics engineering, and data visualization.

Education

Bachelor of Computer Science

From April 2013 to April 2017 [Ho Chi Minh City University of Technology](#) Vietnam

Work experience

Software Engineer

From 2017 to 2018 [Pecan Analytics](#) Louisiana, USA

- Built web and mobile applications to support political campaigns.
- Created a flexible survey tool that allowed managers to assign jobs to field workers. These managers could then track the progress of the assignments.
- Created a mobile app for field workers to submit survey answers. This app is well integrated with Google Maps to help workers know where to go.
- Created interactive visualizations over large datasets (hundreds of thousands) to find desirable subsets.
- Communicated frequently with non-technical users and delivered great user experience.

Senior Software Engineer

From 2018 to 2021 [Liquid Vietnam](#) Vietnam

- Managed all operations within the Tech Operations team.
- Led a project to help admin users manage all the operations of the cryptocurrency exchange system, including user identification and verification, denials, and approvals of exchange transactions.
- Managed the TechOps project helping regular users handle their accounts and all financial activities on the system.

Senior Regional Business Intelligence Developer

From January 2021 to March 2023 [Lazada Singapore](#) Singapore

- Worked with stakeholders to collect data requirements and visualization ideas.
- Developed data models in QlikView, pulling heterogeneous data (sales, traffic, and operations).
- Designed and developed dashboards with QlikSense following data visualization best practices.
- Monitored engagement and helped reach large adoption targets (3,000 daily users).

Senior Full Stack Developer

September 2023 [CoderPush](#) Remote

- Customized a Material UI library and wrote detailed documentation for custom components based on the client's design language.
- Implemented complex and dynamic forms with JSON Schema forms and react-hook-form.
- Animated components and transitions using Framer Motion.
